

POROSZLÓ - TISZA LAKE ECOCENTRE (45 km – 45')

The EcoCentre was opened for public on 26 April 2012. It was designed to collect and show the rich flora and fauna of the Tisza valley and its lake, which is the second largest in Hungary. The four-storey, 2,600 square metre visitor centre has permanent exhibitions, a 3D showroom. It contains the largest freshwater aquarium in Europe with a capacity of over 1,000,000 litres. The natural-looking displays give visitors a truly memorable experience.

Beside tourism the EcoCentre focuses on education. Exploring the exhibitions and participating in any of the special activities can provide an exciting and practical supplement to biology lessons for students in elementary or secondary schools and even colleges. The modern conference room in the main building, accommodating 100 people, is an excellent venue for scientific lectures, conferences or other events.

The EcoCentre was planned to hold community functions, too. It is going to house the local water-police and the lake's storm warning system on top of the look-out tower.

Activities: visit of the main building with 3D movie.

Recreation Park: childrens' water adventure park; rowing or boating on the lake; natural plant-timber labyrinth; water based adventures and activities. 1500 m long timber water walkway with towers for bird watching. Water sports

Fishing

Hunting area for wild boar, deer, hirsch, pheasant, geese, duck, rabbit.
